

AuctionPivots

Installation & Activation Guide — Sierra Chart

What you received

- **AuctionPivotsCommercial_64.dll** — the compiled study, ready to install (no building from source required)
- This guide
- Access to the course library on your Whop dashboard
- A Discord invite for support and community

Requirements

- Sierra Chart installed, **64-bit** version
- Windows (the .dll is Windows-only)
- An active AuctionPivots subscription or lifetime license on Whop

Step 1 — Install the study

1. Download **AuctionPivotsCommercial_64.dll** from your Whop members area.
2. Locate your Sierra Chart **Data** folder. By default this is:

```
C:\SierraChart\Data
```

If you installed Sierra Chart somewhere else, use that install folder's own "Data" subfolder instead.

3. Copy the .dll file into that Data folder.
4. If Windows shows a security warning on the file, right-click it → Properties → check "Unblock" → OK.
5. Fully close and restart Sierra Chart (not just the chart window — the whole application).

Step 2 — Add the study to a chart

- Open any chart window.
- Go to **Analysis > Studies** (or press F6).
- Click **Add Custom Study**.
- Find and add the AuctionPivots studies you subscribed to.
- Click OK to apply.

Step 3 — Activate your license

Each AuctionPivots study checks your license against your subscription automatically. To activate:

- Open the study's **Settings** (double-click the study name in the Studies list).
- Find the license / login field and enter your **Sierra Chart Trader Service Login ID** — found in Sierra Chart under **Global Settings > Login Information**.
- This must be the **same Login ID** you entered in the custom field at Whop checkout — that's how your purchase gets matched to your license.
- Click OK. The study should now plot normally.

Note on this step

License activation can take up to a minute or two after your purchase completes, since it runs through an automated check. If the study still shows no data after a few minutes, see Troubleshooting below.

Troubleshooting

Study doesn't appear in the Add Custom Study list

Confirm the .dll is directly inside the Data folder (not a subfolder), that you're running the 64-bit build of Sierra Chart, and that you fully restarted the application after copying the file.

Study loads but shows no levels / “DENIED”

Double-check your Login ID is entered exactly as it appears in Sierra Chart's Login Information, and that it matches what you submitted at Whop checkout — a typo in either place will block activation.

Still stuck?

Reach out on Discord — we're quick to help with install issues.

Need help?
