

Auction Pivots

Installation & Activation Guide — Sierra Chart

What you received

- **AuctionPivots1.0_64.dll** — the compiled study file, ready to install (no building from source required)
- This guide
- Access to the course library on your Whop dashboard
- A Discord invite for support and community

What's included in this release

This release ships two studies: **Weekly Auction Pivot** and **Monthly Auction Pivot**. The Session Auction Pivot (RTH / London / Asia) is being finished separately and will be added to your suite in a future update at no extra cost — you don't need to do anything to receive it.

Requirements

- Sierra Chart installed, **64-bit** version
- Windows (the .dll is Windows-only)
- An active Auction Pivots subscription or lifetime license on Whop

Step 1 — Install the study

1. Download **AuctionPivots1.0_64.dll** from your Whop members area.
2. Locate your Sierra Chart **Data** folder. By default this is:

```
C:\SierraChart\Data
```

If you installed Sierra Chart somewhere else, use that install folder's own "Data" subfolder instead.

3. Copy the .dll file into that Data folder.
4. If Windows shows a security warning on the file, right-click it → Properties → check "Unblock" → OK.
5. Fully close and restart Sierra Chart (not just the chart window — the whole application).

Step 2 — Add the study to a chart

- Open any chart window.
- Go to **Analysis > Studies** (or press F6).
- Click **Add Custom Study**.
- Add **Auction Pivots — Weekly** and/or **Auction Pivots — Monthly**.
- Click OK to apply.

Step 3 — Activate your license

Each Auction Pivots study checks your license against your subscription automatically. To activate:

- Open the study's **Settings** (double-click the study name in the Studies list).
- Sierra Chart matches your license using your **Sierra Chart Trader Service Login ID** — found in Sierra Chart under **Global Settings > Login Information**.
- This must be the **same Login ID** you entered in the custom field at Whop checkout — that's how your purchase gets matched to your license.
- Click OK. The study should now plot normally.

Note on this step

License activation can take up to a minute or two after your purchase completes, since it runs through an automated check. If the study still shows no data after a few minutes, see Troubleshooting below.

Troubleshooting

Study doesn't appear in the Add Custom Study list

Confirm the .dll is directly inside the Data folder (not a subfolder), that you're running the 64-bit build of Sierra Chart, and that you fully restarted the application after copying the file.

Study loads but shows no levels / "DENIED"

Double-check your Login ID is entered exactly as it appears in Sierra Chart's Login Information, and that it matches what you submitted at Whop checkout — a typo in either place will block activation.

Settings reference

Every setting below is available from the study's Settings window (double-click the study name in the Studies list). Colors and drawing style are fully yours to customize from the **Subgraphs** tab.

Auction Pivots — Weekly

Setting	What it does
Line Width	Thickness of the plotted pivot / high / low lines.
Show Bias HUD	Toggles the on-chart HUD panel that shows current bias and levels.
Box Fill / Transparency	Optional shaded fill between the weekly high and low, with adjustable transparency.
Style 1 / 2 / 3	Line style (solid, dash, or dot) for the pivot, high/low, and extension lines respectively.
Dim Historical Weeks	Fades prior weeks' lines so the current week stands out.
Labels	Label position (off / right / left), format (name+price, price only, name only), font size, and bold.
HUD position & font size	Horizontal/vertical placement (%) and font size of the HUD panel.
HUD colors	Individual color pickers for each HUD line (setup, buy/sell, entry, targets, stop, labels, stats, session).
Reference Chart Number	0 (default) calculates from the chart it's applied to. Enter another chart's number to calculate the weekly pivot from a different chart's data instead.

The Weekly study also runs an always-on **range health check**: it flags weeks with an unusually small or suspect price range in the HUD so you know when a level formed on thin, low-conviction data. This runs automatically and isn't user-configurable.

Auction Pivots — Monthly

Setting	What it does
Show Monthly HUD	Toggles the on-chart HUD panel.
HUD position, size	Horizontal/vertical placement (%) and font size of the HUD panel.
Labels	Label position (off / right / left), format, font size, and bold.
Dim Historical Months	Fades prior months' lines so the current month stands out.
Style 1 / 2 / 3	Line style (solid, dash, or dot) for the pivot, band, and extension lines respectively.

Setting	What it does
Reference Chart Number	0 (default) calculates from the chart it's applied to. Enter another chart's number to calculate the monthly pivot from a different chart's data instead.
